

BING Oil spray jets

The jets for piston cooling in automobile and motorbike engines are available in different versions.

There are jets in our production programme which open at a defined pressure and are cooling the lower side of the piston with a defined oil flow rate.

The different jet versions were designed together with the engine manufacturer and are produced in our company in accordance to our quality standard.

There are jets available with an opening pressure of 1,5 to 2,5 bar and an oil flow rate of 1 to 2 l/min at 4 bar.

Please send us your inquiry if you are interested in our experience in this product range.
